The interest income on the cover pool is extrapolated to 1 year using the currently reported mortgage interest rates.

Investor Report - Liechtenstein Covered Bonds

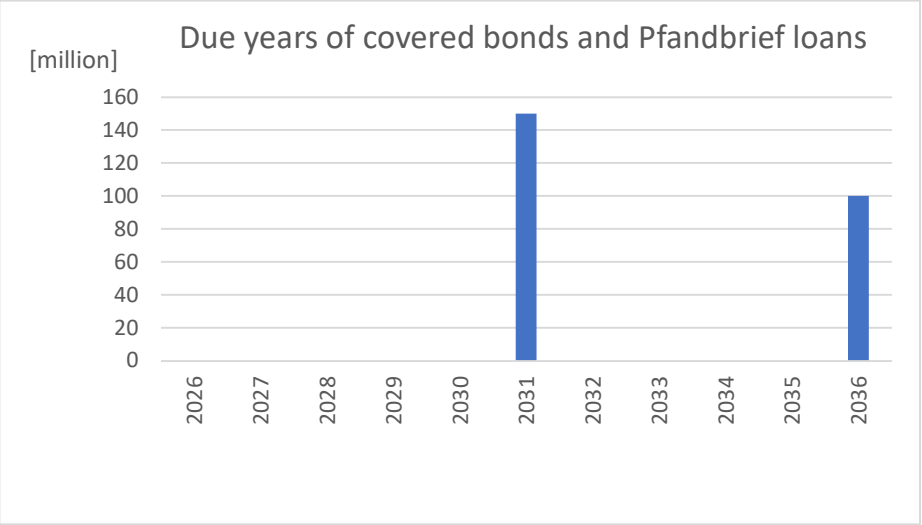

LIECHTENSTEINISCHES PFANDBRIEFINSTITUT

(all amounts in CHF)

reporting date: 30 September 2026

Outstanding covered bonds

ISIN	Nominal amount	Coupon	Start date	Maturity date
CH1548688246	150'000'000.00	0.65%	24.04.2026	24.04.2031
CH1548688253	100'000'000.00	0.90%	24.04.2026	24.04.2036
Total	250'000'000.00			

Note on the maturity profile

As a rule, the Pfandbrief loans granted by the Pfandbrief Institution to its member banks and the covered bond issues are structured on a matched-maturity basis. As a result, the maturity of the Pfandbrief loans corresponds to that of the related covered bond issues, thereby ensuring a consistent maturity structure.

Risk disclosures

Market risk

Market risk comprises potential losses that may arise from adverse changes in interest rates, exchange rates, equity prices, or other relevant market parameters.
The Pfandbrief institution does not make any direct investments, nor does it invest in derivative instruments exposed to equity price risk. Covered bond issuance and the granting of Pfandbrief loans are conducted exclusively in Swiss francs. Investments are likewise made exclusively in Swiss francs and are limited both in terms of volume and quality. The active assumption of interest rate risk for income generation is not part of the Pfandbrief institution's business strategy.

Credit risk

Credit risk refers to the risk that payment claims are not fulfilled in full or on time due to the actual or expected inability or unwillingness of a counterparty to perform.
The Pfandbrief institution grants loans exclusively to its member institutions with high credit quality and on a secured basis. The underlying mortgage collateral is valued on an ongoing basis. In addition, operating processes ensure that sufficient cover value is available at all times.

Liquidity risk

Liquidity risk is the risk that the Pfandbrief institution may not be able to meet its payment obligations as they fall due at all times.
Covered bond issues and Pfandbrief loans are entered into on a matched-maturity basis. In addition, the Pfandbrief institution maintains appropriate liquidity reserves and plans its liquidity requirements with due care in order to limit liquidity risk. The Pfandbrief institution has also put measures in place to enable it to take timely and appropriate risk-mitigating action in the event of a potential deterioration in the credit quality of its member institutions.

Operational risk

Operational risk comprises the risk of loss resulting from inadequate or failed internal processes, people or systems, or from external events.
The Pfandbrief institution applies internal controls and safeguards to minimise operational risk to the extent possible. It has an internal risk management function as well as internal and external audit. In addition, the Pfandbrief institution works exclusively with reliable counterparties in order to identify existing risks at an early stage and manage them appropriately.

Valuation of the cover pool

For all cover assets, the member institutions have carried out an independent valuation of the property and submit this valuation to the Pfandbrief institution as part of the data submission process.
This value is plausibility-checked by the cover pool management function of the Pfandbrief institution using a hedonic valuation model. A mortgaged property is only included in the cover pool with an eligible cover value greater than zero if the value reported by the member institution does not exceed the upper threshold generated by the hedonic model. The volume of mortgage claims fully covers all claims of the Pfandbrief institution vis-à-vis its member banks arising from loans, interest and any additional costs.
